water rights

Through our new three-year engineering sector enabling agreement with DFID for its infrastructure and urban development activities, Mott MacDonald is leading a team of highly experienced consultants committed to helping support DFID-wide operations across the water, transportation and energy sectors – where we offer an immense range of professional and technical expertise, available quickly around the world.

### **powerful capability**

Our 300-strong named team includes engineers, environmentalists, planners, economists, sociologists, cost consultants, project managers, safety experts, IT specialists, educationalists, management consultants and more – helping stakeholders and funding agencies achieve their goals in all aspects of:

- water resources policy and management
- water supply and sanitation
- road, rail and air transport
- energy and renewables

### **ready access, rapid response**

Our enabling agreement is specifically designed to give DFID's world-wide operations fast and efficient access to all our team's professional skills and experience. And through our combined international network and global communications systems we can quickly mobilise the relevant expertise to meet the needs of DFID advisors and officers. As well as providing the core services for engineering development, we can help with any related aspect on a long or short term basis, such as one-off policy discussions or workshops or visits or secondments of any duration to countries receiving or about to receive DFID assistance.

### **total service spectrum**

With the whole team's resources – backed by instant access to independent specialists – we're equipped to provide a total spectrum of advisory, technical and management services. Our mix of highly advanced technical expertise and pro-poor development skills ensures we can cover every stage and facet of the development cycle – including all associated economic, environmental, social and policy issues.
