

WIND TURBINES – VARIOUS DESIGNS

Wind turbine from a small scale wind power scheme in Peru

Wind turbines placed over roads to capture wind generated from passing cars (in development)

Wind turbine used to pump ground water in Kenya

Vertical axis wind turbine takes wind from any direction and can be used in areas where there are buildings and trees

Roof top turbine sends the electricity it produces straight into the house to be used

Wind farm turbines have blades which turn at six times the speed of the wind

Traditional windmill used to grind flour
