

## Have a go at the PRACTICAL ACTION QUIZ!

From all your friends at Practical Action, we hope you have a brilliant time at bluedot festival. Here's a fun little quiz for you to enjoy while you're out and about around the festival site.

**Clue 1:** We all need nutritious food to keep us healthy and give us energy. Where on the bluedot festival site can you fill your tummy with food grown in the ground and on trees?

---

**Clue 2 :** Our phones and devices need energy too! Where on the bluedot festival site can you go to add power to your phone's battery?

---

**Clue 3 :** Plastic waste can pollute the planet unless it's properly treated. Where on the bluedot festival site do plastic bottles go to get ready for a new life?

---

**Clue 4:** It's important to keep hydrated while you're enjoying the festival. Where on the bluedot festival site do you go to fill your water bottle?

---

**Clue 5:** Drinking plenty of water means joining the queue for another popular facility! Where on the bluedot festival site is the "number one" destination?

---

Have you filled in all your answers? Bring your completed sheet to the Practical Action stall. We have a little prize for you!

### Congratulations on completing the Practical Action quiz!

#### Answer 1 – The Power Plant food stalls

There's lots of tasty, nutritious food here at the bluedot festival. Farmers around the world work hard to grow food for us to eat. In Bangladesh, farmers are even growing food on floating gardens!

#### Answer 2 – Phone charging station

Isn't it annoying when your phone or tablet runs out of battery? In poorer parts of the world, people can't plug their devices in as easily as here in the UK. At Practical Action, we're working with people to improve energy access.

#### Answer 3 - Plastic waste recycling bins

When you put your waste plastic in a recycling bin you are making sure it doesn't pollute the environment. Instead, it will get turned into something new – amazing!

#### Answer 4 – Water refill station

We're lucky to have lots of clean, fresh water to drink here at the festival. Visit the Practical Action stall for a virtual reality trip to Turkana to experience what life is like in a place with little fresh water.

#### Answer 5 – Toilets

Toilets and sinks are things many of us take for granted. At Practical Action, we're working with people in poorer parts of the world so they have somewhere private and clean to go to the loo and wash their hands.

We hope you enjoyed our little quiz. Next time you're passing the Practical Action stall, we'd love you to stop by and say hello.

At Practical Action, we believe in the power of small to change the big picture. And that together we can take practical action to build futures free from poverty.

# COLOUR IN A KEYHOLE GARDEN!

Keyhole gardens, which are popular with smallholder farmers in Zimbabwe, are a sustainable way to grow vegetables. They can improve soil conditions and are ideal for regions with unpredictable weather patterns (like here in the UK!)

Keyhole gardens retain moisture and supply nutrients to surrounding plants in just a six-foot round plot. If you have space in your garden, why not build your own?

## Here's how to create your keyhole garden at home:

1. Plot the area for the garden's bed – 3 feet all round from your centre point
2. Construct side walls from bricks, logs and stones
3. Build composting basket – wire, bamboo stakes or hard-wearing cloth work well
4. Secure the basket, making sure it keeps shape
5. Fill the basket, using about 18 inches of good quality soil (the rest can be compost)
6. Add plants to your new keyhole garden – and remember to water!
